## **STRIPS GUIDE**

- 1. Test residue in baggie or cooker, or a tiny amount of powder/crushed drug.
- 2. If testing residue, leave it in baggie or cooker. If testing crushed drug, put a tiny amount into a small container.
- Add ¼ inch clean water to the container, cooker, or baggie and stir to dissolve the powder.
- Insert wavy end of the strip into the liquid no higher than the blue line and hold there for 15 seconds.
- Put the strip down on a clean surface, and wait 5 minutes for result.

\*repeat with a different strip if no lines appear
